

Cloudsorption Shapes - Decorative suspended sound absorbing shapes

Key Benefits

- Variety of available decorative shapes
- Different sizes
- Exceptional sound absorption
- Available in a variety of colours
- Non-flammable

Description

Cloudsorption Shapes are decorative sound absorbing panels designed to be suspended from ceilings. They are available in a variety of interesting shapes including clouds as can be seen in the photo above.

Cloudsorption sound absorbers are now available in a variety of shapes including a wavy edge to resemble clouds, hence the name. When these are suspended at different heights from a ceiling they create an interesting cloud effect appearance that also efficiently absorbs reverberent noise within a room. Reverberent noise is when sound bounces off all of the hard surfaces within a room creating an echo effect. This echo effect makes it more difficult to hear people when they are speaking. Once the Cloudsorption shaped panels are installed the echo effect is diminished and the more panels there are, the greater the improvement will be.

Applications

Ideal for reducing reverberation (echo) in school classrooms, reception areas, restaurants, lecture halls, offices and many other areas where reflected noise is a problem.

Shaped Cloudsorption can also be supplied as triangles, circles, pentagons and hexagons. Please call us for more information on shapes and prices.

More shapes and sizes can be viewed on the Sound Absorbers section of our commercial web site.
